

FRANCESCO GIANNICOLA

Software Engineer & Builder | Cosenza, Italy / Europe | francescogiannicola1@gmail.com | github.com/metaforismo |
linkedin.com/in/francescogiannicola | francescogiannicola.com

EDUCATION

Universita della Calabria	Cosenza, Italy
<i>BSc in Computer Science & Artificial Intelligence; expected graduation 2027</i>	Sep. 2024 – Present
• Active member of the teaching quality committee; academic focus on AI systems, software engineering, algorithms, and reproducible technical work.	

EXPERIENCE & LEADERSHIP

Founder	Jun. 2026 – Present
<i>Limes Labs</i>	<i>github.com/Limes-Labs</i>
• Building an open European AI research and engineering initiative across governed agent systems, model routing, evaluation infrastructure, reproducible research, and open-source AI tooling.	
Open Source Contributor	Jul. 2026 – Present
<i>OpenClaw</i>	<i>23 PRs opened / 18 merged</i>
• 23 upstream pull requests opened, 18 merged as of Aug 2026, across agent runtime, Gateway reliability and performance, automation, native iOS, and messaging/provider integrations.	
• Typical loop: reproduce the issue, implement a focused fix, add regression coverage, collect runtime evidence, and work through upstream review. Not a claim of sole authorship on every line represented by those PRs.	
Founder & Content Lead	Mar. 2020 – Present
<i>Francesco Tech / Personal Brand</i>	<i>Italy</i>
• Built Italian tech media channels across Instagram and TikTok to 70,000+ total followers, generating 4M+ views and 2.5M+ likes through short-form content on technology, AI, gaming, and innovation.	

PROJECTS & RESEARCH

IntentForm	2026
<i>Local-first semantic design environment</i>	<i>github.com/metaforismo/IntentForm</i>
• Built a design environment where humans and coding agents edit the same validated Semantic Interface Graph and compile it deterministically to React, Web, Expo, and SwiftUI, with fingerprint-bound verification.	
Sigil	2026
<i>Experimental systems language and compiler</i>	<i>github.com/metaforismo/sigil-lang</i>
• Implemented a compiler frontend with proof obligations, SMT-LIB verification, Z3, memory/ownership models, and a conditional GCC JIT native-lowering path. Research scaffold, not a production verifier.	
TracePilot	2026
<i>Reliability studio for computer-use agents</i>	<i>github.com/metaforismo/tracepilot</i>
• Built an open-source eval and reliability harness for browser agents: traces, replay, step-level verification, stuck-loop detection, provider adapters, readiness gates, and SHA-256 evidence packs.	
Bite	2026
<i>Native iOS health product</i>	<i>github.com/metaforismo/Bite</i>
• Shipped a SwiftUI health coach with HealthKit, typed-tool AI workflows, memory, lab-report handling, widgets/Live Activities, and a Cloudflare Worker backend.	
The Broadcast Ceiling	2026
<i>RL research artifact</i>	<i>DOI: 10.5281/zenodo.20970205</i>
• Released a reproducible long-horizon RL credit-assignment paper with finite-MDP audits, estimator-fidelity diagnostics, committed result tables, a canonical LaTeX PDF, and a Zenodo DOI.	

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Swift, Python, Rust, C++
Interfaces: React, Next.js, SwiftUI, Expo, Electron
Infrastructure: Node.js, Cloudflare, SQLite, PostgreSQL, Docker, GitHub Actions, Git
Systems: tool-using agents, LLM evals, tracing, Playwright, Z3/SMT, CMake, reproducible evidence tooling

AWARDS & LANGUAGES

- **OII Italian Olympiad in Informatics:** participant.
- **Languages:** Italian native; English intermediate; French basic; Spanish basic.
